Class : 7th  
Subject : Science  
Chapter : 11

Chapter Name : Transportation In Animals And Plants

Q1 Match structures given in Column I with functions given in Column II.

Column I	Column II
(i) Stomata	(a) Absorption of water
(ii) Xylem	(b) Transpiration
(iii) Root hairs	(c) Transport of food
(iv) Phloem	(d) Transport of water
	(e) Synthesis of carbohydrates

Answer.

Column I	Column II
(i) Stomata	(b) Transpiration
(ii) Xylem	(d) Transport of water
(iii) Root hairs	(a) Absorption of water
(iv) Phloem	(c) Transport of food

Q2 Fill in the blanks.

- The blood from the heart is transported to all parts of the body by the \_\_\_\_\_.
- Haemoglobin is present in \_\_\_\_\_ cells.
- Arteries and veins are joined by a network of \_\_\_\_\_.
- The rhythmic expansion and contraction of the heart is called \_\_\_\_\_.
- The main excretory product in human beings is \_\_\_\_\_.
- Sweat contains water and \_\_\_\_\_.
- Kidneys eliminate the waste materials in the liquid form called \_\_\_\_\_.
- Water reaches great heights in the trees because of suction pull caused by \_\_\_\_\_.

Answer. (i) The blood from the heart is transported to all parts of the body by the arteries.  
(ii) Haemoglobin is present in red blood cells.  
(iii) Arteries and veins are joined by a network of capillaries.  
(iv) The rhythmic expansion and contraction of the heart is called heartbeat.  
(v) The main excretory product in human beings is urea.

(vi) Sweat contains water and salts.

(vii) Kidneys eliminate the waste materials in the liquid form called urine.

(viii) Water reaches great heights in the trees because of suction pull caused by transpiration.

Q3 Choose the correct option:

(a) In plants, water is transported through

(i) xylem

(ii) phloem

(iii) stomata

(iv) root hair

(b) Water absorption through roots can be increased by keeping the plants

(i) in the shade

(ii) in dim light

iii. under the fan

iii. covered with a polythene bag

Answer. (a) (i) xylem

(b) (iii) under the fan

Q4 Why is transport of materials necessary in a plant or in an animal? Explain.

Answer. Transport of materials is necessary in both plants and animals as every cell needs a regular supply of nutrients and oxygen for releasing energy through respiration. The food that we eat is broken down into smaller components to be absorbed by the cells. The oxygen that we inhale is also transported to all the cells of the body. Our body also requires a constant removal of waste materials such as carbon dioxide. For the transport of all these materials (food, oxygen, and wastes), our body has a specialised transport system. Similarly, in plants, the transport of water and food is accomplished with the help of a complex transport system.

Q5 What will happen if there are no platelets in the blood?

Answer. If there are no platelets in the blood, then the blood would not be able to clot. A clot is formed because of platelets. They release blood clotting chemicals at the site of injury. These chemicals form a clot and prevent further bleeding.

Q6 What are stomata? Give two functions of stomata.

Answer. Stomata are tiny pores present on the surface of a leaf. Functions of stomata:

(a) Stomata help in the exchange of gases.

(b) Evaporation of water from the leaf surface occurs through stomata.

### Functions of stomata

Page : 132 , Block Name : Exercise

Q7 Does transpiration serve any useful function in the plants? Explain.

Answer. Transpiration is the evaporation of water from the plants. The water evaporates through the stomata present on the surface of the leaves. Transpiration is mainly responsible for the loss of water that was absorbed by the plants. However, it is important for plants as it helps in the movement of water to the top of tall trees. As a result, it helps in the distribution of water throughout the plant body. It also helps in cooling the plant.

Q8 Given below is a square of letters in which are hidden different words related to respiration in organisms. These words may be present in any direction — upwards, downwards, or along the diagonals. Find the words for your respiratory system. Clues about those words are given below the square.

S	V	M	P	L	U	N	G	S
C	Z	G	Q	W	X	N	T	L
R	M	A	T	I	D	O	T	C
I	Y	R	X	Y	M	S	R	A
B	R	H	I	A	N	T	A	Y
S	T	P	T	B	Z	R	C	E
M	I	A	M	T	S	I	H	A
S	P	I	R	A	C	L	E	S
N	E	D	K	J	N	S	A	T

- (i) The air tubes of insects
- (ii) Skeletal structures surrounding chest cavity
- (iii) Muscular floor of chest cavity
- (iv) Tiny pores on the surface of leaf
- (v) Small openings on the sides of the body of an insect

- (vi) The respiratory organs of human beings
- (vii) The openings through which we inhale
- (viii) An anaerobic organism
- (ix) An organism with tracheal system

Answer.

- (i) Trachea
- (ii) Ribs
- (iii) Diaphragm
- (iv) Stomata
- (v) Spiracles
- (vi) Lungs
- (vii) Nostrils
- (viii) Yeast

Q9 Why is blood needed by all the parts of a body?

Answer. Blood is needed by all parts of the body as it is an important part of the transport system of our body. It performs the following important functions:

- (i) It transports O<sub>2</sub> from the lungs to all the body cells.
- (ii) It carries CO<sub>2</sub>, a waste product back to the lungs so that it can be exhaled easily.
- (iii) It transmits heat, thus regulating the body temperature.
- (iv) It also fights off diseases and infections.

Q10 What makes the blood look red?

Answer. The presence of haemoglobin, a red pigment in the red blood cells (RBCs) makes blood appear red in colour. The haemoglobin carries oxygen and transports it to all the parts of the body.

Q11 Describe the function of the heart.

Answer. The human heart is divided into four chambers. The upper two chambers are called right and left atrium and the lower two chambers are called the right and left ventricles. Right atrium receives carbon

dioxide-rich right ventricle, which contracts and pumps blood to the lungs.

### Flow of blood in the human heart

On the other hand, oxygen rich blood from the lungs returns to the left atrium. From the left atrium, blood enters left ventricle. Left ventricle contracts and pumps the blood to all parts of the body. Hence, the rhythmic contraction and expansion of various chambers of the heart maintains the transport of oxygen to all parts of the body.

Q12 Why is it necessary to excrete waste products?

Answer. All cells of our body produce waste products. These waste products are toxic to the body and therefore need to be excreted out. This process of removing waste products produced in the cells of living organisms is called excretion.
