Comprehension:

In the following passage some words have been deleted. Fill in the blanks with the help of the alternatives given. Select the most appropriate option for each blank.

Polio was once a disease feared worldwide, striking suddenly and paralysing mainly children (1)_____ life. WHO is a partner in the Global Polio Eradication Initiative, the (2)_____ private-public partnership for health, which has (3)_____ polio by 99%. Polio now survives (4)_____ among the world's three poorest and (5)_____ marginalised communities, where it stalks the most (6)_____ children. These are – Afghanistan, Nigeria and Pakistan. (7)_____ poliovirus transmission is interrupted in these countries, all (8)_____ remain at risk of importation of polio, (9)_____ vulnerable countries with weak public health and immunisation services. WHO's goal is (10)_____ every last child with polio vaccine and ensure a polio-free world for future generations.

SubQuestion No : 70

Q.70 Select the most appropriate option for blank no. 5.

Ans

✗ 1. a lot

✓ 2. most

Comprehension:

Read the given passage carefully and answer the questions that follow.

Indian mathematician Nikhil Srivastava, working at the University of California in Berkeley, is among the winners of the Prestigious 2021 Michael and Sheila Held Prize, announced last week by the US National Academy of Sciences (NAS). Adam W Marcus, EPFL (Swiss Federal Institute of Technology, Lausanne) and Daniel Alan Spielman, Yale University, are the other two winners.
"Marcus, Spielman and Srivastava solved longstanding questions on the Kadison-Singer problem and on Ramanujan graphs, and in the process uncovered a deep new connection between linear algebra, geometry of polynomials, and graph theory that has inspired the next generation of theoretical computer scientists," the NAS said in a statement.
An Indian national, Nikhil was born in New Delhi in November 1983 and has attended educational institutions across the world – Syria, UK, Saudi Arabia, and US – as his father was an Indian Foreign Services officer, who has served as the Indian ambassador to Uganda and Denmark. At present, Nikhil is an associate professor of mathematics at UC Berkeley.
The Michael and Sheila Held Prize is presented annually to honour outstanding, innovative, creative and influential research in the area of combinatorial mathematics.

SubQuestion No : 86

Q.86 Which of the following is NOT true of Nikhil Srivastava according to the passage?

Ans

✗ 1. He is now a faculty at the University of California.

✗ 2. He was born in North India in the early 1980s.

✓ 3. He has served as the Indian ambassador to Denmark and Uganda.

✗ 4. He had his education in many countries around the world.

Comprehension:

Read the following passage and answer the questions that follow.

When consuming your favourite fruit is forbidden by your doctor or dietician, it is time to find out why rather than trying to have more of it on the sly. Conventional diet advice for weight watchers and diabetics puts mangoes in the red list, and not without reason. Keeping scientific information about mangoes in mind, recommendations about the fruit warrant a re-look. This is because of its impact on body weight, blood sugar and health.

It's true that ripe mangoes are high in carbohydrates, sugars and have a high glycaemic index. One of the seventh most popular fruits worldwide, it provides roughly 80 kilocalories per 100 g (a medium-sized ripe mango would carry about 130-150 calories), which mainly come from carbohydrates (20 per cent).

Due to high sugar content, mangoes are high in calories. But does this mean that diabetics and weight watchers should be banned from having it? The answer is no, if one adjusts for calories, i.e. substitutes it with an equivalent amount of calories and carbohydrates in the meal.

Better still, combine it with a low-glycaemic food. Low glycaemic foods include pulses, legumes, low-fat dairy (milk, curd), vegetables, nuts and seeds. So mangoes can make a safe entry into the diet, if one is able to keep the caloric intake and carbohydrates constant, i.e. take the right amounts. With over 2,500 varieties around the world, the popularity of mangoes clearly lies in its aromatic sweetness. This tropical fruit also can boast of a huge array of impressive health benefits.

The mango is known to be an excellent source of many vitamins such as vitamin C (ascorbic acid), B vitamins (thiamine, riboflavin, and niacin), and Vitamin A (ß-carotene). Ripe mangoes generally possess a higher number of phenolics, researchers say. This makes mangoes a good source of antioxidants with anti-cancer and anti-inflammatory properties. With reasonably good fibre content, it provides a good combination of soluble and insoluble fibre. Soluble fibre is good for digestion and its insoluble variant is good for management of blood cholesterol and sugar levels.

But before you start planning a mango party, there is need for caution. Remember that mangoes, being high on sugars, predominantly fructose, should be consumed in appropriate portions. This is true particularly for weight watchers, diabetics and those with high cholesterol levels.

SubQuestion No : 91

Q.91 The main idea of the passage is that:

Ans

✗ 1. diabetics should not eat mangoes

✓ 2. mangoes should be eaten in appropriate proportion

✗ 3. mango is a nutritious fruit

✗ 4. mango is one of the most popular fruits

Comprehension:

Read the following passage and answer the questions that follow.

When consuming your favourite fruit is forbidden by your doctor or dietician, it is time to find out why rather than trying to have more of it on the sly. Conventional diet advice for weight watchers and diabetics puts mangoes in the red list, and not without reason. Keeping scientific information about mangoes in mind, recommendations about the fruit warrant a re-look. This is because of its impact on body weight, blood sugar and health.
It's true that ripe mangoes are high in carbohydrates, sugars and have a high glycaemic index. One of the seventh most popular fruits worldwide, it provides roughly 80 kilocalories per 100 g (a medium-sized ripe mango would carry about 130-150 calories), which mainly come from carbohydrates (20 per cent).
Due to high sugar content, mangoes are high in calories. But does this mean that diabetics and weight watchers should be banned from having it? The answer is no, if one adjusts for calories, i.e. substitutes it with an equivalent amount of calories and carbohydrates in the meal.
Better still, combine it with a low-glycaemic food. Low glycaemic foods include pulses, legumes, low-fat dairy (milk, curd), vegetables, nuts and seeds. So mangoes can make a safe entry into the diet, if one is able to keep the caloric intake and carbohydrates constant, i.e. take the right amounts. With over 2,500 varieties around the world, the popularity of mangoes clearly lies in its aromatic sweetness. This tropical fruit also can boast of a huge array of impressive health benefits.

Comprehension:

Read the following passage and answer the questions that follow.

Rajasthan's farmers have been banging plates and lighting fires these days. It is their desperate attempt to scare away the swarms of migratory locusts invading their fields and eating away crops. The pest attack has come as a double blow for farmers already reeling under the impact of the Covid lockdown.

Millions of locusts, covering 1-4 sq km of the skyline, have reached 10 of the state's 33 districts within three weeks of being first spotted on April 30. Last year, yellow locusts had entered India from Pakistan in the second half of May. The attack had originated from Yemen, coming all the way to West Asia and Pakistan and then India, creating havoc in 17 countries en route.

With the harvest nearly over in Rajasthan, the invading population of grasshoppers this May is feeding mainly on sprouting cotton crop sown last month, vegetables and fodder. State officials, though, fear damage to the young millet and moong dal crops due in July and August if the locusts breed.

Flying in through the Pakistan border near Jaisalmer, the locust swarms have infiltrated as deep as Kishangarh in Ajmer district. Locusts can cover 200-250 km in a day if they get wind support. Presently, the dust storms sweeping parts of Rajasthan are aiding their flight.

Officials said the Union agriculture ministry's Locusts Warning Organisation (LWO) is in the process of acquiring 60 vehicles with mounted insecticide sprayers from abroad by July. Ten such vehicles were purchased this January.

"Immature pink locusts are very active, which is why they have reached the interiors of Rajasthan [from Pakistan] so quickly," says K.L. Gurjar, deputy director, LWO. Their metabolism slows down during winters, but in summers, they can fly from 4 am to 8 pm, covering long distances and consuming more crops along the way than mature locusts would.

The LWO has put 10 insecticide-spraying vehicles on the job in Rajasthan. The Rajasthan government has provided rented tractors, on which insecticide sprayers are mounted, and also the manpower to man them. The Centre-state joint operation has so far cleared a few hundred sq km of fields of the locusts. Preliminary estimates put the loss to crops at a few crore rupees.

State officials say there is an urgent need to contain the pink locusts before they start breeding in the next few weeks. Indiscriminate aerial spraying of insecticides is ill-advised as this can damage crops as well as affect human settlements.

One of the strategies being considered now is to use fixed-wing aircraft for ultra-low volume spraying of chemicals. The state government may request for such aerial sorties by the air force. Drones have limited capabilities as they can carry only about 20 litres of insecticide at a time, making them effective only over small areas.

SubQuestion No : 96

Q.96 It can be inferred from the passage that the present swarm of locusts consists of:

Ans

✗ 1. yellow mature locusts

✗ 2. yellow immature locusts

✗ 3. pink mature locusts

✓ 4. pink immature locusts

aglasem.com

Comprehension:

Read the given passage carefully and answer the questions that follow.

If you pay close attention to soap advertisements, you may hear of its pH value being claimed perfect for human skin. But is there really such a thing? Let's start at the beginning. pH (potential Hydrogen) is defined as the concentration of hydrogen ions in a solution. pH value ranges between 0 and 14. 7 is the neutral point, 0 being the most acidic and 14 being the most alkaline. More importantly, your skin isn't exactly pH 5.5; it falls in a range between 4.0 and 7.0, depending on diverse factors like the body part, age, genetics, ethnicity, and environment conditions.
So, are products formulated at pH 5.5 perfect for skin? The short answer: not really! First, parameters like texture and other ingredients indicate a cleanser's quality, much better than pH alone. Second, though the skin pH rises slightly immediately after cleaning even with plain water, it reverts to its mild acidic pH in an hour. Healthy skin quickly rebalances the 'acid mantle' – a protective layer over the skin – and is unaffected in the long term by the cleanser's pH. Skin modulates pH, making skin products function optimally. So, why market pH 5.5 products as "perfect"? Well, for certain skin types (e.g., oily skin) and certain skin conditions (like acne), an increase in pH can aggravate these skin situations. This might lead to an interpretation that a skin care product needs to be at a 5.5 pH for optimum cleansing.
Hence, skincare experts have expressed reservations about pH being the sole criterion of product safety and 'acid mantle' preservation when factors including plain water may contribute to the same. Thus, an ideal product is almost impossible to define. So, look well beyond pH alone.

SubQuestion No : 86

Q.86 "Is there really such a thing?" By "such a thing" the author is referring to:

Ans
✔ 1. the perfect pH value for human skin
✘ 2. soap advertisements
✘ 3. close attention paid to advertisements
✘ 4. the perfect soap for all skin types

Question ID : **81616112169**
Status : **Answered**
Chosen Option : **1**

Comprehension:

Read the given passage carefully and answer the questions that follow.

If you pay close attention to soap advertisements, you may hear of its pH value being claimed perfect for human skin. But is there really such a thing? Let's start at the beginning. pH (potential Hydrogen) is defined as the concentration of hydrogen ions in a solution. pH value ranges between 0 and 14. 7 is the neutral point, 0 being the most acidic and 14 being the most alkaline. More importantly, your skin isn't exactly pH 5.5; it falls in a range between 4.0 and 7.0, depending on diverse factors like the body part, age, genetics, ethnicity, and environment conditions.
So, are products formulated at pH 5.5 perfect for skin? The short answer: not really! First, parameters like texture and other ingredients indicate a cleanser's quality, much better than pH alone. Second, though the skin pH rises slightly immediately after cleaning even with plain water, it reverts to its mild acidic pH in an hour. Healthy skin quickly rebalances the 'acid mantle' – a protective layer over the skin – and is unaffected in the long term by the cleanser's pH. Skin modulates pH, making skin products function optimally. So, why market pH 5.5 products as "perfect"? aglasem.com

Comprehension:

Read the following passage and answer the questions that follow.

The strain, Tropical Race 4 (TR4), was first identified in Taiwan, and has jumped from Asia to the Middle East and Africa, reaching as far as Latin America. Scientists are describing it as the equivalent of Covid-19 in bananas. As the coronavirus disease outbreak rages on, 'fusarium wilt TR4', a novel fungus strain that has devastated plantations across the globe this year, is setting up new hotspots and threatening output in India, the world's largest producer of bananas. It cripples plantations by first attacking the leaves, which turn yellow from their trailing edges before wilting away. There is no effective remedy yet.
"One could say it is the Covid-19 of the plant world. Hotspots have been found in Bihar and Uttar Pradesh, which we are trying to contain," said S. Uma, the director of National Research Centre for Bananas (NRCB), Trichy.
According to the Food and Agriculture Organization (FAO) of the United Nations, TR4 is one of the 'the most destructive of all plant diseases'. As with Covid-19, there is no treatment yet. So, scientists recommend biosecurity measures including 'plant quarantine' to slow its spread. The spreading disease has jeopardised the $26 billion global banana trade.
A healthy snack, banana is the world's most globally exported fruit, according to the FAO. That's a reason for worry as the disease is breaching borders through imports.

India produces 27 million tonnes of bananas annually and grows about 100 varieties. TR4 has infected the most commonly sold variety, the one you mostly likely have for breakfast: Grand Nain a curvy yellow fruit.
Inability to contain TR4 could jolt farm incomes and push up banana prices. One medium banana (126 gms) provides about 110 calories, 0 gram fat, 1 gram protein, 28 grams carbohydrate, 15 grams sugar (naturally occurring), 3 grams fibre and 450 mg potassium and trace quantities of vitamin C and B6, according to the Hyderabad-based National Institute of Nutrition.
Most of India's bananas are consumed domestically. Equador, the largest exporter, is currently the epicentre and scientists haven't been able to ascertain how TR4 entered India. Fusarium wilt is not new. It entirely wiped out Gros Michel, the dominant export variety of bananas in 1950s. It was in response to this that a new resistant variety, Grand Nain, came up. That has now fallen to TR4. The challenge is to now identify or develop new resistant varieties. That's the only way to manage it, according to Uma, until an effective agent is found.
The Indian Council of Agricultural Research is advocating a set of measures, known as 'biopriming'. It has asked farmers whose plantations have been affected to abandon them. They must grow rice for a year or two before returning to banana. "That way the chain is broken," said R Selvarajan, a scientist with the NRCB.

SubQuestion No : 91

Q.91 'Biopriming', a measure suggested by the Indian Council of Agricultural Research, requires:

Ans
✗ 1. identifying hotspots and quarantining them

✗ 2. quarantining banana plants

✗ 3. trimming the diseased banana plants

✓ 4. abandoning banana plantation and growing rice for a year

So, scientists recommend biosecurity measures including 'plant quarantine' to slow its spread. The spreading disease has jeopardised the $26 billion global banana trade.
A healthy snack, banana is the world's most globally exported fruit, according to the FAO. That's a reason for worry as the disease is breaching borders through imports.

India produces 27 million tonnes of bananas annually and grows about 100 varieties. TR4 has infected the most commonly sold variety, the one you mostly likely have for breakfast: Grand Nain a curvy yellow fruit.
Inability to contain TR4 could jolt farm incomes and push up banana prices. One medium banana (126 gms) provides about 110 calories, 0 gram fat, 1 gram protein, 28 grams carbohydrate, 15 grams sugar (naturally occurring), 3 grams fibre and 450 mg potassium and trace quantities of vitamin C and B6, according to the Hyderabad-based National Institute of Nutrition.
Most of India's bananas are consumed domestically. Equador, the largest exporter, is currently the epicentre and scientists haven't been able to ascertain how TR4 entered India. Fusarium wilt is not new. It entirely wiped out Gros Michel, the dominant export variety of bananas in 1950s. It was in response to this that a new resistant variety, Grand Nain, came up. That has now fallen to TR4. The challenge is to now identify or develop new resistant varieties. That's the only way to manage it, according to Uma, until an effective agent is found.
The Indian Council of Agricultural Research is advocating a set of measures, known as 'biopriming'. It has asked farmers whose plantations have been affected to abandon them. They must grow rice for a year or two before returning to banana. "That way the chain is broken," said R Selvarajan, a scientist with the NRCB.

SubQuestion No : 92

Q.92 After reading this passage it can be said that it is:

Ans

✗ 1. a technical report

✗ 2. a narrative

✓ 3. a news report

✗ 4. an epilogue

Question ID : **81616111149**

Comprehension:

Read the following passage and answer the questions that follow.

The strain, Tropical Race 4 (TR4), was first identified in Taiwan, and has jumped from Asia to the Middle East and Africa, reaching as far as Latin America. Scientists are describing it as the equivalent of Covid-19 in bananas. As the coronavirus disease outbreak rages on, 'fusarium wilt TR4', a novel fungus strain that has devastated plantations across the globe this year, is setting up new hotspots and threatening output in India, the world's largest producer of bananas. It cripples plantations by first attacking the leaves, which turn yellow from their trailing edges before wilting away. There is no effective remedy yet.
"One could say it is the Covid-19 of the plant world. Hotspots have been found in Bihar and Uttar Pradesh, which we are trying to contain," said S. Uma, the director of National Research Centre for Bananas (NRCB), Trichy.
According to the Food and Agriculture Organization (FAO) of the United Nations, TR4 is one of the 'the most destructive of all plant diseases'. As with Covid-19, there is no treatment yet. So, scientists recommend biosecurity measures including 'plant quarantine' to slow its spread. The spreading disease has jeopardised the $26 billion global banana trade.

Comprehension:

Read the given passage and answer the questions that follow.

Anna Pávlovna's drawing room was gradually filling. The highest Petersburg society was assembled there: people differing widely in age and character but alike in the social circle to which they belonged.
Prince Vasíli's daughter, the beautiful Hélène, wore a ball dress and her badge as maid of honor. The youthful little Princess Bolkónskaya, known as the most fascinating woman in Petersburg was also there. Vasíli's son, Hippolyte, Mortemart and many others had also come.
To each new arrival Anna Pávlovna said, "You have not yet seen my aunt," or "You do not know my aunt?" and very gravely conducted him or her to a little old lady, wearing large bows of ribbon in her cap, who had come sailing in from another room as soon as the guests began to arrive; and slowly turning her eyes from the visitor to her aunt, Anna Pávlovna mentioned each one's name and then left them.
Each visitor performed the ceremony of greeting this old aunt whom not one of them knew, not one of them wanted to know, and not one of them cared about; Anna Pávlovna observed these greetings with mournful and solemn interest and silent approval. The aunt spoke to each of them in the same words, about their health and her own.

And each visitor, though politeness prevented his showing impatience, left the old woman with a sense of relief at having performed a vexatious duty and did not return to her the whole evening.

SubQuestion No : 96

Q.96 The guests seemed:

Ans

✗ 1. very glad to be introduced to Anna

✗ 2. very delighted to meet Anna's aunt

✗ 3. interested in talking about their health

✓ 4. least interested in Anna's aunt
