Comprehension:

Michaelangelo is famous for having successfully interpreted the human body. His great achievement is that of the painting of David whose hands reach out as a sign of human capability and potential. It is assumed that the time he lived was ripe for exchange of knowledge, development in science and matured enough to advance the horizon of investigation in all fields. Renaissance humanism stressed on a serious rethink on the nature of art that focussed on accurate details. In painting and sculpture, artists focussed on not so casual but verifiable and minute details. Michaelangelo's paintings are no exception to it. In a study published in the journal of the Royal Society of medicine, a group of surgeons are of the opinion that the great master was "afflicted by an illness involving his joints". They have used his portraits as evidence to argue their view. During his life, he complained of what he felt to be 'gout'. Later he complained of his sore and stiff hands which the doctors would find to be natural for someone who was engaged in handmade art. The doctors found corroboration of those claims in portraits of the artist that show a hanging left hand with both degenerative and non-degenerative changes. They attribute the pain not just to arthritis, but to the stress of hammering and chiseling and note that though the master was seen hammering days before his death at an old age, he did not write or sign his own letters before his death. In recent times there have been attempts to diagnose famous artists with diseases that were not known during their time. This practice has raised many questions, especially on the issue of ethics in research. It is also inferred from authentic analysis that Michaelangelo persisted in his work until his last days. This theory would emphasize that his artistic subject defied his physical infirmities.

Comprehension:

Since the end of the Cold War, Western policy-makers have presented human rights, democracy and market economies as a package. The relations between markets and human rights are, however, complex, problematic and not well understood. The relations between democracy and human rights are also problematic, because, although democracies generally respect human rights better than authoritarian regimes do, democracies can violate human rights, and the protection of human rights may require limitations on democracy. In practice, the Western powers have interpreted 'democracy' to mean free and fair elections, and, desirable though these are, they are not only not sufficient conditions for the protection of human rights, but sometimes accompany, and perhaps even cause, the deterioration of human rights. In many recent cases there has been because elected governments have pursued market-based economic policies that have not only worsened the protection of economic and social rights for the most vulnerable sections of society (specially women), but also provoked increases in crime that have led to restrictions on civil and political rights. We must also distinguish between *democracy* and *democratization*, the process of political change that has a problematic relation to human rights for somewhat different reasons. The transition from authoritarianism to democracy may be a change from imposed order to regulated conflict. Where there is little or no tradition of democratic politics, and also economic hardship and/or ethnic divisions, the restraints that democracy places on conflict may break down. The results may resemble the human-rights catastrophes of Rwanda or Yugoslavia, in both of which countries the processes of democratization were involved in the ensuing human-rights tragedies.

The relations between markets and human rights are, however, complex, problematic and not well understood. The relations between democracy and human rights are also problematic, because, although democracies generally respect human rights better than authoritarian regimes do, democracies can violate human rights, and the protection of human rights may require limitations on democracy. In practice, the Western powers have interpreted 'democracy' to mean free and fair elections, and, desirable though these are, they are not only not sufficient conditions for the protection of human rights, but sometimes accompany, and perhaps even cause, the deterioration of human rights. In many recent cases there has been because elected governments have pursued market-based economic policies that have not only worsened the protection of economic and social rights for the most vulnerable sections of society (specially women), but also provoked increases in crime that have led to restrictions on civil and political rights. We must also distinguish between *democracy* and *democratization*, the process of political change that has a problematic relation to human rights for somewhat different reasons. The transition from authoritarianism to democracy may be a change from imposed order to regulated conflict. Where there is little or no tradition of democratic politics, and also economic hardship and/or ethnic divisions, the restraints that democracy places on conflict may break down. The results may resemble the human-rights catastrophes of Rwanda or Yugoslavia, in both of which countries the processes of democratization were involved in the ensuing human-rights tragedies.
