Read the following passage and answer questions which follow.

Even though globalisation is one of the most discussed topics in the contemporary world, it is not altogether a well defined concept. A multitude of global interactions are put under the broad heading of globalisation, varying from the expansion of cultural and scientific influences across borders to the enlargement of economic and business relations throughout the world. A wholesale rejection of globalisation would not only go against global business, it would also cut out movements of ideas, understanding, and knowledge that can help all the people of the world, including the most disadvantaged members of the world population. A comprehensive rejection of globalisation can thus be powerfully counterproductive. There is a strong need to separate out the different questions that appear merged together in the rhetoric of the antiglobalisation protests. The globalisation of knowledge deserves a particularly high profile recognition, despite all the good things that can be rightly said about the importance of "Local knowledge".

Globalisation is often seen, both in journalistic discussions and in remarkably many academic writings, as a process of westernization. Indeed, some who take an upbeat view of the phenomenon even sees it as a contribution of Western civilization to the world.

Comprehension:

Read the passage below and answer the questions (91-95) those follow, based on your understanding of the passage :

In any kind of research reporting, the researcher must appropriately select one from among a number of possible stories, accurately re-present the evidence (which may consist of, for example, numbers, texts or images if an empirical report or the work of others if library based), and include sufficient contextual information to enable an in-depth understanding of what is being described and the limitations and implications of the descriptions. Although this is true across disciplines, it is within the social sciences that writers seem most troubled about the perceived and real authenticity of their representations. For example, the sociologist Clifford Geertz was concerned about those authors who claimed to have 'actually penetrated other worlds' and about the way words have the power to distort, stating that it is appropriate to possess a worry about the legitimacy of speaking for others, a worry about the distorting effects of Western assumptions on the perception of others, and a worry about the ambiguous involvements of language and authority in the depiction of others.

Comprehension:

Read the passage below and answer the questions (91-95) those follow, based on your understanding of the passage :

In any kind of research reporting, the researcher must appropriately select one from among a number of possible stories, accurately re-present the evidence (which may consist of, for example, numbers, texts or images if an empirical report or the work of others if library based), and include sufficient contextual information to enable an in-depth understanding of what is being described and the limitations and implications of the descriptions. Although this is true across disciplines, it is within the social sciences that writers seem most troubled about the perceived and real authenticity of their representations. For example, the sociologist Clifford Geertz was concerned about those authors who claimed to have 'actually penetrated other worlds' and about the way words have the power to distort, stating that it is appropriate to possess a worry about the legitimacy of speaking for others, a worry about the distorting effects of Western assumptions on the perception of others, and a worry about the ambiguous involvements of language and authority in the depiction of others.

Read the passage below and answer the questions (96-100) those follow, based on your understanding of the passage :

The plant 'amaranth' is known in north India as 'Ramdana' (the Lord's Grain). It is also known as Chulai and grows abundantly between the altitudes of 1000-3000 metres in the Himalayan Region. It is also grown in Madhya Pradesh, Gujarat, Maharashtra and Tamil Nadu. The most common Amaranth grain variety used in India is *Amaranthus hybridus*. It is believed to have risen from a strain found in Latin America. While Scientists classify amaranth as a grain, Most Indians treat it as a non-cereal. This allows 'ramdana' to be eaten as 'phalahar' during the fasts. Various dishes are also made of it. 'Ratanjot' or cocks Comb, which imparts the characteristic red hue in delicacy 'Rogan Josh' is the root of 'amaranth'. It is used for medicines as well. Traditional wisdom recognises its beneficial properties. It alleviates piles, reduces eczema, provides relief in colic and acts as diuretic. Indian farmers even feed their cows with amaranth.
