Q.41

Read the following case study paragraph carefully and answer the questions based on the same.
The central bank of India (Reserve Bank of India) is the apex institution that controls the entire financial market. It's one of the major function is to maintain the reserve of foreign exchange. Also, it intervenes in the foreign exchange market to stabilise the excessive fluctuations in the foreign exchange rate. In other words, it is the central bank's job to control a country economy through monetary policy.
If the economy is moving slowly or going backward, there are steps that central bank can take to boost the economy. These steps, whether they are asset purchases or printing more money, all involve injecting more cash into the economy. The simple supply and demand economic projection occur and currency will devalue. When the opposite occurs, and the economy is growing, the central bank will use various methods to keep that growth steady and in-line with other economic factors such as wages and prices. Whatever the central bank does or in fact don't do, will affect the currency of that country. Sometimes, it is within the central bank's interest to purposefully affect the value of a currency. For example, if the economy is heavily reliant on exports and their currency value becomes too high, importers of that country's commodities will seek cheaper supply; hence directly affecting the economy.

Emerging Alternate Marketing Channels: It has been realised that if farmers directly sell their produce to consumers, it increases their incomes. Some examples of these channels are Apni Mandi (Punjab, Haryana and Rajasthan); Hadaspur Mandi (Pune); Rythu Bazars (vegetable and fruit markets in Andhra Pradesh and Telangana) and Uzhavar Sandies (farmers markets in Tamil Nadu). Further, several national and multinational fast food chains are increasingly entering into contracts/ alliances with farmers to encourage them to cultivate farm products (vegetable, fruits, etc.) of the desired quality by providing them with not only seeds and other inputs but also assured procurement of the produce at pre-decided prices. It is argued that such arrangements will help in reducing the price risks of farmers and would also expand the markets for farm products.
