Electrical Engineering

Section Id :	78773224
Section Number :	1
Mandatory or Optional :	Mandatory
Number of Questions :	120
Section Marks :	120
Enable Mark as Answered Mark for Review and Clear Response :	Yes
Maximum Instruction Time :	0
Is Section Default? :	null

Question Number : 1 Question Id : 7877322761 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A circuit has 1000 turns enclosing a magnetic circuit 20 m^2 cross section with 5 A current. The flux density is 1 Wb/m^2 with this and 1.4 Wb/m^2 with 10 A current. Find the emf induced if the current fell uniformly from 10 A to 5 A in 0.1 sec.

Options :

1. ✖ 12 V

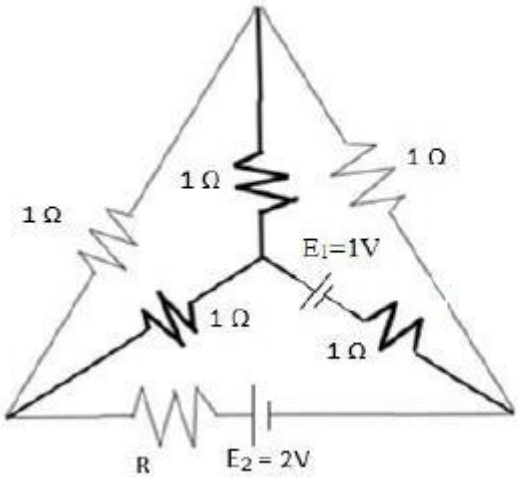

2. ✔ 8 V

3. ✖ 16 V

4. ✖ 10 V

Question Number : 2 Question Id : 7877322762 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The value of R if $E_1 = 0$ in the following circuit is ____ Ω.

Options :

1. ✖ 2

2. ✖ 4

3. ✖ ½

4. ✔ 1

Question Number : 3 Question Id : 7877322763 Display Question Number : Yes Is Question

Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A wire carries a current which is a combination of direct current 20 A and a sinusoidal current of 20 A peak. The RMS value of the current is ____.

Options :

1. ✖ 2.45 A

2. ✖ 20 A

3. ✔ 24.5 A

4. ✖ 28.28 A

Question Number : 4 Question Id : 7877322764 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A circuit with R, L and C in series is resonant at f_0 Hz, and bandwidth is Δf. If the component values of all of them are quadrupled, the new resonant frequency and bandwidth would be

Options :

1. ✖ $f_0, \frac{\Delta f}{4}$

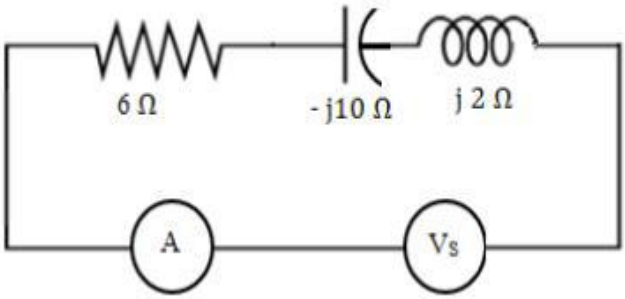

2. ✖ $\frac{f_0}{2}, 2\Delta f$

3. ✔ $\frac{f_0}{4}, \Delta f$

4. ✖ $\frac{f_0}{16}, \frac{\Delta f}{2}$

Question Number : 5 Question Id : 7877322765 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The ammeter in the circuit reads 20 A. The supply voltage of the circuit is

Options :

1. ✖ 40 V

2. ✖ 100 V

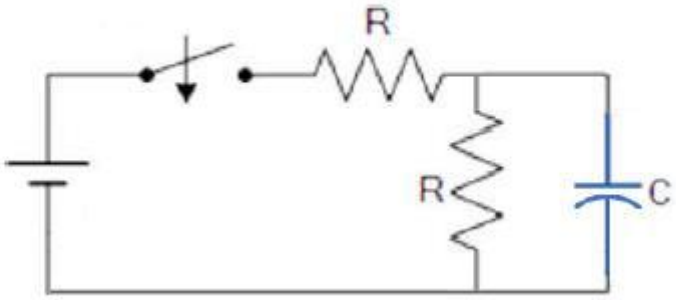

3. ✖ 120 V

4. ✔ 200 V

Question Number : 6 Question Id : 7877322766 Display Question Number : Yes Is Question

Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The time constant of the following circuit is

Options :

1. ✖ 3RC

2. ✖ $\frac{RC}{2}$

3. ✖ 2RC

4. ✔ $\frac{2RC}{3}$

Question Number : 7 Question Id : 7877322767 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A 3-Ø 3 wire supply feeds a load consisting of three equal resistors connected in star. If one of the resistors is opened the percentage reduction of the load is

Options :

1. ✖ 33.33

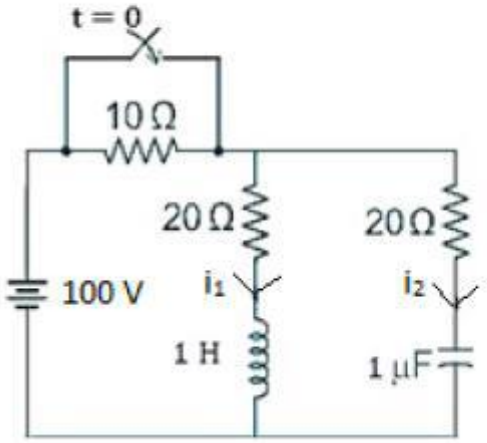

2. ✔ 50

3. ✖ 66

4. ✖ 75

Question Number : 8 Question Id : 7877322768 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

For the circuit shown in the figure the value of $\frac{di_2}{dt}|_{t=0^+}$ is

Options :

1. ✖ -83 A/s

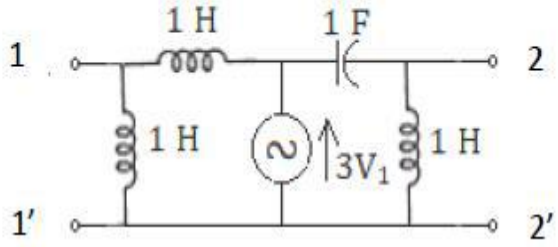

2. ✖ -830 A/s

3. ✖ -8300 A/s

4. ✔ -83000 A/s

Question Number : 9 Question Id : 7877322769 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The z-parameters of the following network is

Options :

1. ✔ $\begin{bmatrix} -s & 0 \\ \frac{-3s}{1+s^2} & \frac{s}{1+s^2} \end{bmatrix}$

2. ✖ $\begin{bmatrix} 0 & s \\ \frac{3s}{1+s^2} & \frac{-s}{1+s^2} \end{bmatrix}$

3. ✖ $\begin{bmatrix} \frac{-s}{1+s^2} & -s \\ 0 & \frac{3s}{1+s^2} \end{bmatrix}$

4. ✖ $\begin{bmatrix} s & \frac{3s}{1+s^2} \\ 0 & \frac{s}{1+s^2} \end{bmatrix}$

Question Number : 10 Question Id : 7877322770 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The Y- parameters of a two-port network are $Y_{11} = 0.4\,\mho, Y_{21} = Y_{12} = -0.1\,\mho,$ $Y_{22} = 0.2\,\mho$. The transmission parameters of the system are

Options :

1. ✖ $\begin{bmatrix} 10 & 2 \\ 0.7 & -4 \end{bmatrix}$

2. ✖ $\begin{bmatrix} 20 & 1 \\ -0.7 & -8 \end{bmatrix}$

3. ✔ $\begin{bmatrix} 2 & 10 \\ 0.7 & 4 \end{bmatrix}$

4. ✖ $\begin{bmatrix} 4 & 10 \\ 1.4 & 8 \end{bmatrix}$

Question Number : 11 Question Id : 7877322771 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

If a capacitor is energised by a symmetrical square wave current source, then the voltage across the capacitor will be

Options :

1. ✖ impulse function

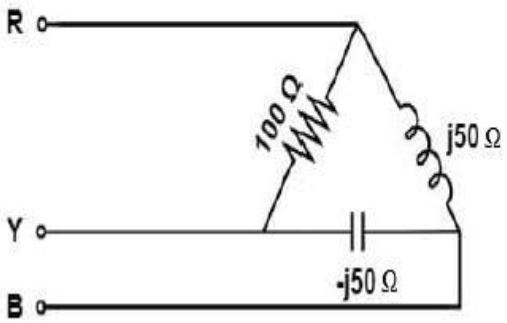

2. ✖ step function

3. ✖ square wave

4. ✔ triangular wave

Question Number : 12 Question Id : 7877322772 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A set of three equal resistors of R_x are connected in star consumes the same power as the unbalanced delta connected load as shown in the figure. The value of R_x is

Options :

1. ✖ 10

2. ✖ 150

3. ✔ 100

4. ✖ 50

Question Number : 13 Question Id : 7877322773 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The electric flux density in a static electric field is $x^2\overline{a_x} + xy\overline{a_y} + z^2\overline{a_z}\ C/m^2$. The volume charge desnsity at x = 1.0 m, y = 2.0 m, z = 3 m is

Options :

1. ✖ $12\ C/m^3$

2. ✖ $10\ C/m^3$

3. ✖ $8\ C/m^3$

4. ✔ $9\ C/m^3$

Question Number : 14 Question Id : 7877322774 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The highest possible potential of an isolated spherical conductor of radius 0.8 m (when the maximum strength of air is 80 KV/m) is

Options :

1. ✖ 89 KV

2. ✖ 98 KV

3. ✔ 64 KV

4. ✖ 100 KV

Question Number : 15 Question Id : 7877322775 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

If $\bar{J} = 100^3 sin\theta\ \overline{a_r}\ A/m^2$ in spherical coordinates, the current that crosses a spherical shell of radius 0.04 m is

Options :

1. ✖ 4.2 mA

2. ✖ 10 mA

3. ✔ 1.58 mA

4. ✖ 2.72 mA

Question Number : 16 Question Id : 7877322776 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Which of the following statements is true in case of the boundary conditions for two perfect dielectric materials

Options :

1. ✖ $Etan1 \neq Etan2, D_{N1} = D_{N2}$

2. ✔ $Etan1 = Etan2, D_{N1} - D_{N2} = \rho_S$

3. ✖ $Etan1 = Etan2, D_{N1} = D_{N2}$

4. ✖ $\frac{Etan1}{Etan2} = \frac{\epsilon_2}{\epsilon_1}, \quad D_{N1} + D_{N2} = \rho_S$

Question Number : 17 Question Id : 7877322777 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A capacitor is composed of two parallel plates separated by a sheet of insulating material 3 mm thickness and a relative permittivity 4. The distance between the plates is increased to allow the insulator of a second sheet of 5 mm thickness and a relative permittivity ϵ_r. If the resultant capacitance is $1/3^{rd}$ of the original capacitance. The value of ϵ_r is

Options :

1. ✖ 2.33

2. ✔ 3.33

3. ✖ 3

4. ✖ $2/3$

Question Number : 18 Question Id : 7877322778 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The vector magnetic potential $\overline{A} = 10xy\,\overline{a_x} + 10y^2\,\overline{a_y}$. The value of $\overline{B}$ at (1,0,-1) is

Options :

1. ✖ $-10\overline{a_x}$

2. ✖ 0

3. ✔ $10\overline{a_z}$

4. ✖ $-10\overline{a_y}$

Question Number : 19 Question Id : 7877322779 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A conductor is bent in the form of a regular hexagon inscribed in a circle of radius 10 cm.

The magnetic flux density at the centre of hexagon if the current in the conductor is 10 A, be

Options :

1. ✖ $73.87\ \mu_0\ \text{Wb/m}^2$

2. ✖ $62.23\ \mu_0$ Wb/m^2

3. ✖ $47.85\ \mu_0$ Wb/m^2

4. ✔ $55.16\ \mu_0$ Wb/m^2

Question Number : 20 Question Id : 7877322780 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A circular loop of current 10 A, located on $x^2 + y^2 = 9, z = 0$. The value of $\vec{H}$ at (0,0,4) and (0,0,-4) respectively is (in A/m)

Options :

1. ✔ $0.36\ \overline{a_z}$, $0.36\ \overline{a_z}$

2. ✖ $0.36\ \overline{a_z}$, $-0.36\ \overline{a_z}$

3. ✖ $-0.36\ \overline{a_z}$, $0.36\ \overline{a_z}$

4. ✖ $-0.36\ \overline{a_z}$, $-0.36\ \overline{a_z}$

Question Number : 21 Question Id : 7877322781 Display Question Number : Yes Is Question

Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A conductor of length 5 m with current flowing in $\overline{a_y}$ direction of 10 A, lies along y-axis between Y = $\pm$2.5 m in the field of 0.05 $\overline{a_x}$ Tesla. The work done in moving the conductor parallel to it at constant speed to x = z = 2 m, is

Options :

1. ✖ 2.5 J

2. ✖ 3 J

3. ✖ 4.5 J

4. ✔ 5 J

Question Number : 22 Question Id : 7877322782 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Moist soil has conductivity of $10^{-3}\,\mho/m$ and $\epsilon_r = 2.5$. The value of $|\overline{J_D}|$ where $|\overline{E}| = 6\text{x}10^{-6}\sin(9\text{x}10^{9})\text{t}$ V/m is

Options :

1. ✖ $6\text{x}10^{-9}\sin(9\text{x}10^{9})\text{t}$ A/m^2

2. ✖ $0.6\text{x}10^{-6}\cos(9\text{x}10^{9})\text{t}$ A/m^2

3. ✖

$1.2x10^{-9}\sin(9x10^{9})t\ A/m^2$

4. ✔ $1.2x10^{-9}\cos(9x10^{9})t\ A/m^2$

Question Number : 23 Question Id : 7877322783 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A three phase full wave converter is fed by three phase source with peak line to neutral voltage as Vm then the peak inverse voltage rating of a thyristor is

Options :

1. ✔ $\sqrt{3}\ Vm$

2. ✖ $\sqrt{2}\ Vm$

3. ✖ $\frac{Vm}{\sqrt{3}}$

4. ✖ $\frac{Vm}{\sqrt{2}}$

Question Number : 24 Question Id : 7877322784 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A phase controlled converter with R-L load and operated with firing angle α , whether the current is continuous or discontinuous depends on

Options :

1. ✖ R only

2. ✖ α and L

3. ✔ R, L and α

4. ✖ L and R

Question Number : 25 Question Id : 7877322785 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The output voltage and frequency of sinusoidal pulse width modulated inverter can be varied by

Options :

1. ✔ By varying the reference signal amplitude and frequency

2. ✖ By varying the reference signal frequency only

3. ✖ By varying the carrier signal frequency

4. ✖ By varying the reference signal voltage amplitude only

Question Number : 26 Question Id : 7877322786 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The distortion factor of a single phase full bridge inverter is

Options :

1. ✖ 0.1

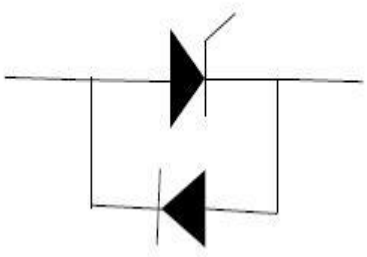

2. ✔ 0.9

3. ✖ 0.8

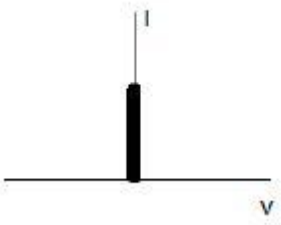

4. ✖ 0.6

Question Number : 27 Question Id : 7877322787 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

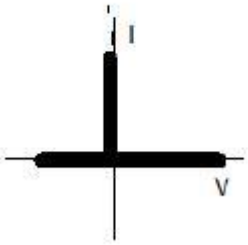

Choose the ideal characteristics of composite power semiconductor device shown below

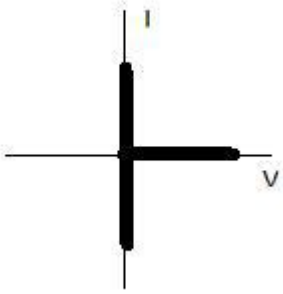

Options :

1. ✖ 

2. ✖ 

3. ✖ 

4. ✔ 

Question Number : 28 Question Id : 7877322788 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The device which is very popular in switched mode power supplies is

Options :

1. ✖

SCR

2. ✔ MOSFET

3. ✖ BJT

4. ✖ IGBT

Question Number : 29 Question Id : 7877322789 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

In case of a three phase full converter, load current is 10A and ripple free, then the average and r.m.s values of thyristor currents are respectively

Options :

1. ✖ 10, 5

2. ✖ 5, $10/\sqrt{2}$

3. ✔ $10/3$, $10/\sqrt{3}$

4. ✖ 5, 3

Question Number : 30 Question Id : 7877322790 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A step-up chopper has input voltage as 100V and output voltage is 300V. What is the conduction time of chopper if the total time period is 300 µsec.

Options :

1. ✖ 300 µsec

2. ✔ 200 µsec

3. ✖ 100 µsec

4. ✖ 50 µsec

Question Number : 31 Question Id : 7877322791 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Choose the advantages of slip power recovery scheme for speed control of induction motor

Options :

1. ✖ lower rating of power converters

2. ✖ Wide range of speed control

3. ✖ slip power is recovered

4. ✔ All the above

Question Number : 32 Question Id : 7877322792 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A single phase separately excited dc motor fed by single phase full converter with $\alpha = 60^0$, the speed is 600 rpm. When this motor fed from single phase half controlled converter with the same firing angle the speed would be

Options :

1. ✖ 600 rpm

2. ✔ 900 rpm

3. ✖ 800 rpm

4. ✖ 200 rpm

Question Number : 33 Question Id : 7877322793 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Induction motor with 2 poles fed by 50 Hz frequency voltages, the rated slip is 2700 rpm. The speed of induction motor is controlled by v/f method using inverter. The inverter frequency is set at 40Hz and run at rated speed. What is the running speed of motor?

Options :

1. ✖ 2000 rpm

2. ✖ 2400 rpm

3. ✔ 2160 rpm

4. ✖ 2280 rpm

Question Number : 34 Question Id : 7877322794 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A single phase full bridge inverter is operated in square wave mode with inductive load and the inverter frequency of operation is f then the total feedback diodes conduction time is

Options :

1. ✖ 1/f

2. ✔ 1/(2f)

3. ✖ 1/(4f)

4. ✖ 1/(8f)

Question Number : 35 Question Id : 7877322795 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

When the induction motor is operated in constant torque and constant power regions

Options :

1. ✔ air-gap flux is constant, air-gap flux is weakened respectively

2. ✖ air-gap flux is weakened and air-gap flux is constant respectively

3. ✖ stator frequency is always below the rated frequency

4. ✖ stator frequency is always above the rated frequency

Question Number : 36 Question Id : 7877322796 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A dc chopper is used to implement regenerative braking of a separately excited dc motor.

The dc supply is 200V.The armature resistance r_a = 0.1 Ω and motor constant is 0.1 v-s/rad.

The average armature current during the regenerative braking is kept constant at 100A.The minimum braking speed is ----- if the duty cycle of chopper is 0.5.

Options :

1. ✔ 100 rad/sec

2. ✖ 200 rad/sec

3. ✖ 50 rad/sec

4. ✖ 400 rad/sec

Question Number : 37 Question Id : 7877322797 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A rectangular pulse of high amplitude and narrow width is used as gating pulse for SCR

Options :

1. ✖ to increase turn on time

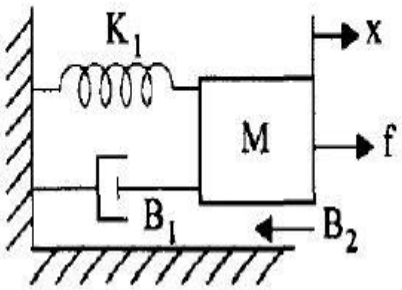

2. ✔ to reduce turn on time

3. ✖ to increase turn off time

4. ✖ to decrease turn off time

Question Number : 38 Question Id : 7877322798 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The transfer function for the following mechanical translational system X(s)/F (s) is.

Options :

1. ✔ $\frac{1}{s^2M + s\,(B_1 + B_2) + k_1}$

2. ✖ $\frac{1}{s^2M + s\,(B_1 - B_2) + k_1}$

3. ✖ $\frac{1}{s^2M + 2s\,(B_1 + B_2) + k_1}$

4. ✖ $\frac{1}{s^2M + s\,(B_1 + B_2) + K_1^2}$

Question Number : 39 Question Id : 7877322799 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Sensitivity of overall transfer function for a small change in forward path transfer function G(s), for open loop system is

Options :

1. ✖ 0

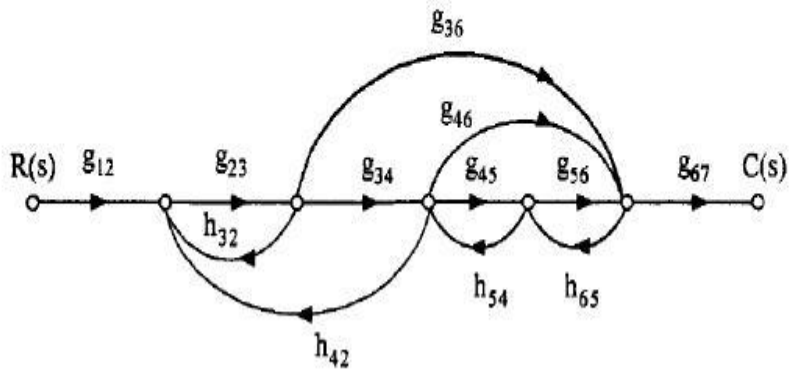

2. ✔ 1

3. ✖ ∞

4. ✖ -1

Question Number : 40 Question Id : 7877322800 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

For the following signal graph, the number of forward paths and the number of Combinations of two non touching loops are respectively

Options :

1. ✖ 3 ; 4

2. ✖ 3 ; 2

3. ✖ 2 ; 3

4.

✔ 3 : 3

Question Number : 41 Question Id : 7877322801 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The normalized peak time of a second order system if $\delta = 0.8$ is

Options :

1. ✖ π

2. ✖ $0.6\,\pi$

3. ✔ $1.67\,\pi$

4. ✖ 0.8π

Question Number : 42 Question Id : 7877322802 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The root locus of a unity feedback system for the following open loop transfer function $G(s) = \frac{K(s+2)}{s(s+1)(s+4)}$, the angles made by asymptotes are respectively

Options :

1. ✖ 0^0 & 180^0

2. ✖ 90^0 & 180^0

3. ✔ 90^0 & 270^0

4. ✖ 0^0 & 270^0

Question Number : 43 Question Id : 7877322803 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Open loop transfer function of a system having one zero with a positive real value is called

Options :

1. ✖ zero phase function

2. ✖ positive phase function

3. ✖ negative phase function

4. ✔ non-minimum phase function

Question Number : 44 Question Id : 7877322804 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Which of the following are the advantages of Nyquist stability test?

(A) it guides in stabilizing an unstable system

(B) it is unable to predict closed loop stability from open loop results

(C) it is applicable to experimental results of frequency response of open loop system

Options :

1. ✖ A and B only

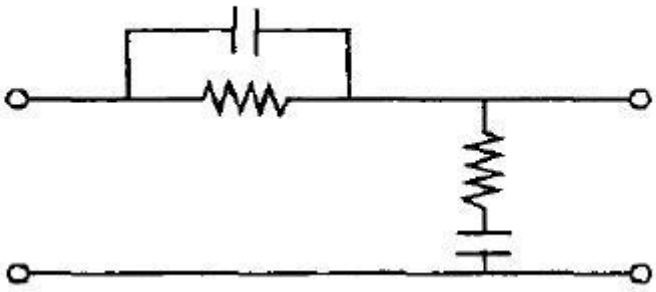

2. ✖ B and C only

3. ✔ C and A only

4. ✖ A, B and C only

Question Number : 45 Question Id : 7877322805 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The following network represents

Options :

1. ✖ Lag network

2. ✔ Lag-lead network

3. ✖ Lead network

4. ✖ Lead-lag network

Question Number : 46 Question Id : 7877322806 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The value of A matrix in $\dot{X} = AX$ for the system described by the differential equation:

$\ddot{y} + 2\dot{y} + 3y = 0$ form is

Options :

1. ✖ $\begin{bmatrix} 1 & 0 \\ -2 & -1 \end{bmatrix}$

2. ✔ $\begin{bmatrix} 0 & 1 \\ -3 & -2 \end{bmatrix}$

3. ✖ $\begin{bmatrix} 1 & 0 \\ -1 & -2 \end{bmatrix}$

4. ✖ $\begin{bmatrix} 0 & 1 \\ -2 & -3 \end{bmatrix}$

Question Number : 47 Question Id : 7877322807 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A linear time invariant system is described by the following dynamic equation

$\dot{X} = AX + Bu$ and $Y = CX$; $A = \begin{bmatrix} 0 & 1 \\ -2 & -3 \end{bmatrix}$; $B = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$; $C = [1 \quad 1]$

The system is

Options :

1. ✔ Controllable but unobservable

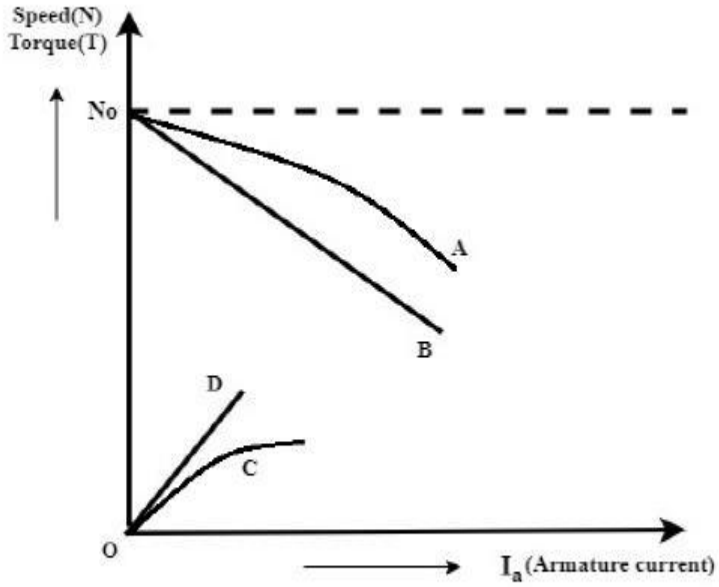

2. ✖ Both controllable and observable

3. ✖ Observable but not controllable

4. ✖ Both unobservable and uncontrollable

Question Number : 48 Question Id : 7877322808 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The characteristics of d.c shunt motor for constant V_t (terminal voltage) and I_f (field current) is given below.

Which of the above curves represent N versus I_a and T versus I_a respectively with armature reaction neglected?

Options :

1. ✖ A and D

2. ✖ B and C

3. ✔ B and D

4. ✖ A and C

Question Number : 49 Question Id : 7877322809 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Identify the correct statement from the following?

Options :

1. ✔ For a simplex progressive lap winding the commutator pitch and winding pitch are 1 and 2 respectively

2. ✖ For a simplex progressive lap winding the commutator pitch and winding pitch are 1 and -2 respectively

3. ✖ For a simplex progressive wave winding the commutator pitch and winding pitch are 1 and 2 respectively

4. ✖ For a simplex progressive wave winding the commutator pitch and winding pitch are 1 and - 2 respectively

In a d.c machine, the commutator is used to

(i) Convert a.c to d.c

(ii) Convert d.c to a.c

(iii) Keep the armature m.m.f stationary in space

(iv) Keep the armature m.m.f revolving in space

Which of the following statements are correct?

Options :

1. ✖ (i) & (ii)

2. ✔ (i) (ii) & (iii)

3. ✖ (i) (ii) & (iv)

4. ✖ (i) & (iv)

Question Number : 51 Question Id : 7877322811 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

In an electromagnetic relay, the relation between the current 'i' in the exciting coil, the position of armature "x" and the flux linkages 'ψ' is given by ψ = ix. The magnetic force on the armature is

Options :

1. ✔ $(\frac{\psi}{x})^2$

2. ✖ $\left(\frac{\psi}{x}\right)$

3. ✖ $\frac{\psi^2}{x}$

4. ✖ $\frac{\psi}{x^2}$

Choose the correct option based on the two statements given below.

Statement I: A voltage-controlled oscillator (VCO) is an electronic oscillator whose output frequency is proportional to its input voltage

Statement II: An oscillator produces a periodic AC signal, and in VCOs, the oscillation frequency is determined by voltage

Options :

1. ✖ Only Statement I is correct

2. ✖ Only Statement II is correct

3. ✔ Both Statements I and II are correct

4. ✖ Both Statements I and II are incorrect

Question Number : 98 Question Id : 7877322858 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

While designing a particular combinational circuit with P and Q as inputs, it is found that "$PQ = 0$" then "P XOR Q" is equal to

Options :

1. ✔ $P+Q$

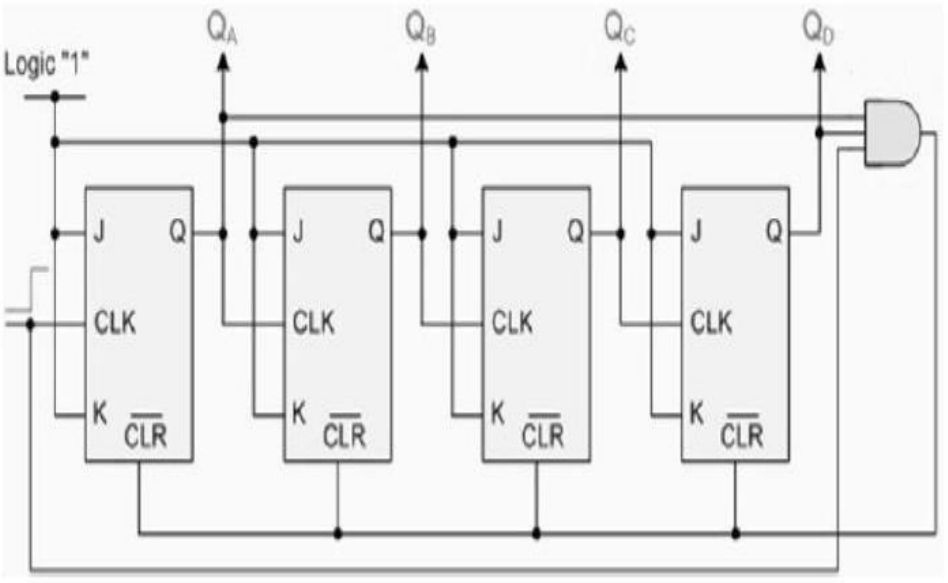

2. ✖ $P+\overline{Q}$

3. ✖ $\overline{P}+Q$

4. ✖ $\overline{P+Q}$

Question Number : 99 Question Id : 7877322859 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

The sequential circuit made up of J-K flip-flops and NAND gate shown below behaves as a

Options :

1. ✔ Asynchronous decade counter

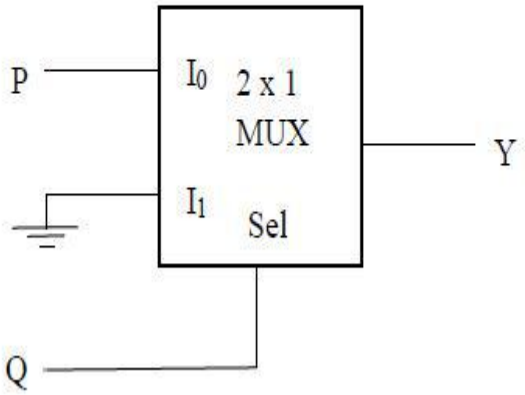

2. ✖ Synchronous decade counter

3. ✖ Asynchronous Mod-16 counter

4. ✖ Synchronous Mod-16 counter

Question Number : 100 Question Id : 7877322860 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

In the circuit shown below, P and Q are the inputs. The logical function realized by the circuit shown below is

Options :

1. ✖ $Y = PQ$

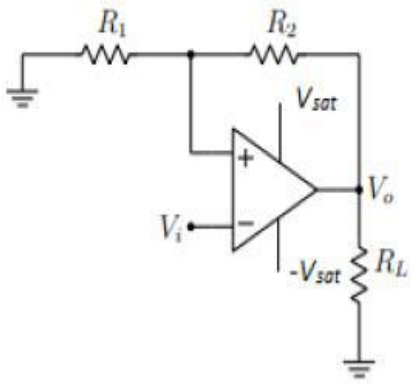

2. ✖ $Y = P + Q$

3. ✔ $Y = P\overline{Q}$

4. ✖ $Y = \overline{P} + \overline{Q}$

Question Number : 101 Question Id : 7877322861 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

For the op-amp based inverting Schmitt trigger shown, the upper threshold voltage (V_{UT}) is given by

Options :

1. ✖ $\frac{R_1}{R_1+R_2}.(-V_{sat})$

2. ✔ $\frac{R_1}{R_1+R_2}.V_{sat}$

3. ✖ $\frac{R_2}{R_1+R_2}.V_{sat}$

4. ✖ $\frac{R_2}{R_1+R_2}.(-V_{sat})$

Question Number : 102 Question Id : 7877322862 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Which among the following statement(s) is/are true for multivibrator(s)?

A. Bistable multivibrator is basically a flip-flop with no stable states to produce a single pulse neither HIGH nor LOW in value

B. One-shot multivibrators convert short sharp pulses into much wider ones for timing applications

C. A monostable multivibrator is a free running oscillator that has no permanent "meta" or "steady" state

D. Bistable multivibrators are best used in circuits such as Latches and Counters

Options :

1. ✖ (A), (B), (C) and (D) are correct

2. ✖ Only (A) and (B) are correct

3. ✖ (B), (C) and (D) are correct

4. ✔ Only (B) and (D) are correct

Question Number : 103 Question Id : 7877322863 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

A simple sample and hold circuit consists of which of the following?

(A) Analog switch (B) Holding capacitor (C) Memristor (D) SCR

Options :

1. ✖ (B) and (D) only

2. ✖

(A) and (C) only

3. ✖ (B) and (C) only

4. ✔ (A) and (B) only

Question Number : 104 Question Id : 7877322864 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Which among the following statements is not true for given A/D converters?

A. Flash ADC facilitates ultra-high speed data rates. However, it is large in size

B. No need for anti-aliasing filters in $\Delta - \Sigma$ ADC. However, the circuit is complex

C. SAR ADC gives high resolution and accuracy. However, the speed is limited

D. Parallelism in Pipeline ADC causes lower power consumption as well as latency

Options :

1. ✖ Only (A) and (B) are correct

2. ✔ (A), (B), (C) and (D) are correct

3. ✖ (B), (C) and (D) are correct

4. ✖ Only (C) and (D) are correct

For an input code of 10110011, an 8-bit DAC produces 3.58 V. The same DAC produces 2 V as output for _____ input code?

Options :

1. ✖ 11100100

2. ✖ 01100101

3. ✖ 01100110

4. ✔ 01100100

The status of the microprocessor before/after an operation is shown by its flags. Thus, the correct representation of 8085 microprocessor flag register is

Options :

1. ✔

S	Z	x	AC	x	P	x	C

2. ✖

C	AC	F0	RS1	RS0	OV	-	P

3. ✖

x	x	x	x	OV	D	I	T	S	Z	x	AC	x	P	x	C

4. ✖

x	x	x	N	OV	Z	DC	C

Question Number : 107 Question Id : 7877322867 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

What is the outcome of the following 8085 program?

```
LDA   9100H
MOV   C, A
LDA   9150H
STA   9100H
MOV   A, C
STA   9150H
HLT
```

Options :

1. ✖ The content of memory location 9100H gets subtracted with that of 9150H

2. ✖ The content of memory location 9100H gets added with that of 9150H

3. ✔ The contents of memory locations 9100H and 9150H get exchanged

4. ✖ No change in the memory locations 9100H and 9150H

A fair coin is tossed till a head appears for the first time. The Probability that the number of required tosses is Odd, is

Options :

1. ✖ 1/3

2. ✔ 2/3

3. ✖ 3/4

4. ✖ 1/2

Question Number : 120 Question Id : 7877322880 Display Question Number : Yes Is Question Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

When the Newton-Raphson method is applied to solve the equation $f(x) = x^4 - x - 10 = 0$, the solution at the end of the first iteration with the initial guess value as $x = 2$ is

Options :

1. ✖ 3.871

2. ✖ 2.871

3. ✔ 1.871

4. ✖ 0.871
