Q4 Give reasons.

- (i) The rainforests are depleting.  
(ii) Paddy is grown in the Ganga-Brahmaputra plains.

Answer. (i) The rainforests are depleting because of the developmental activities that are going on at fast speed. The biologically diverse rainforests are being destroyed day by day. It is estimated that a large area of the rainforest has been disappearing annually in the Amazon basin. As a result the topsoil is washed away when the rains fall and the lush green forest turns into a barren landscape.

(ii) The cultivation of paddy requires sufficient water. The Ganga-brahmaputra plains fulfil this condition because they receive high rainfall.
