3. Read the passage given below and answer the questions that follow :

Vegetables are important protective food and highly beneficial for the maintenance of health and prevention of disease. They contain valuable food ingredients which can be successfully utilized to build-up and repair the body. Vegetables are valuable in maintaining alkaline reserve in the body. They are valued mainly for their high vitamin and mineral contents. Vitamins A, B and C are contained in vegetables in fair amounts. Faulty cooking and prolonged careless storage can, however, destroy these valuable elements.

There are different kinds of vegetables. They may be edible roots, stems, leaves, fruits and seeds. Each group contributes to diet in its own way. Fleshy roots are high in energy value and good sources of vitamin B group. Seeds are relatively high in carbohydrates and proteins. Leaves, stems and fruits are excellent sources of minerals, vitamins, water and roughage. It is not the

P.T.O.

green vegetables only that are useful. Farinaceous vegetables consisting of starchy roots such as potatoes, sweet potatoes, the tubers, arid legumes are also valuable. They are excellent sources of carbohydrates and provide energy to the body.

To derive maximum benefits of their nutrients, vegetables should be consumed fresh as far as possible. Most vegetables are best consumed in their natural raw state in the form of salads. An important consideration in making salads is that the vegetables should be fresh, crisp and completely dry. If vegetables have to be cooked, it should be ensured that their nutritive value is preserved to the maximum extent possible.

- (i) Why are vegetables important for us ? 3
- (ii) How are the valuable elements in vegetables destroyed ? 3
- (iii) What are the farinaceous vegetables ? 3
- (iv) What should be done to derive the maximum benefits from vegetables ? 3
